Controllability Code	Present-Absent-NoInfo	Brief code interpretation	Extended code interp
0	NoInfo	no info available	indicates that no one has indicated with confidence any specific presence/absence information for this species on this island (UNRESEARCHED; often because the species has been added to the matrix with incomplete [or no] information with the intent that the details are TO BE RESEARCHED at a later date)
1	Present	controllable (islandwide)	present on this island (curated specimen cited OR at least one knowledgeable person has indicated with confidence that this species is present on this island); deemed by expert opinion to be potentially controllable islandwide on this island
2	Present	uncontrollable (islandwide)	present on this island (curated specimen cited OR at least one knowledgeable person has indicated with confidence that this species is present on this island); deemed by expert opinion to be uncontrollable islandwide on this island
3	Present	present, controllability unknown	present on this island (curated specimen cited OR at least one knowledgeable person has indicated with confidence that this species is present on this island); controllability unknown islandwide (based on info from experts consulted)
4	Absent	potentially present	at least one knowledgeable person has indicated that this species is not known from this island (and no one has indicated that it is OR HAS EVER BEEN known from this island), but suitable habitat for the species exists on this island; OR no one has indicated that they know that this species is (or has ever been) present on this island (and no one has asserted that the species could not be found on the island due to lack of suitable habitat), and "comprehensive" references that we've checked [i.e. Wagner et al. 1990, Wester 1992] do NOT indicate presence of this species on this island: therefore, searching for this species on this island may be warranted (ongoing, to monitor whether the species arrives on the island; and/or now, to confirm presence/absence)
5	Absent	absent (no habitat)	at least one knowledgeable person has indicated that this species is not known from this island, and that this species is not likely to become established on this island due to lack of suitable habitat islandwide (NOTE: Every attempt has been made to assign this category CONSERVATIVELY; it is used ONLY for Kahoolawe, Niihau, and the Northwest Hawaiian Islands.)
